

Sunnyvale Rooftop Array

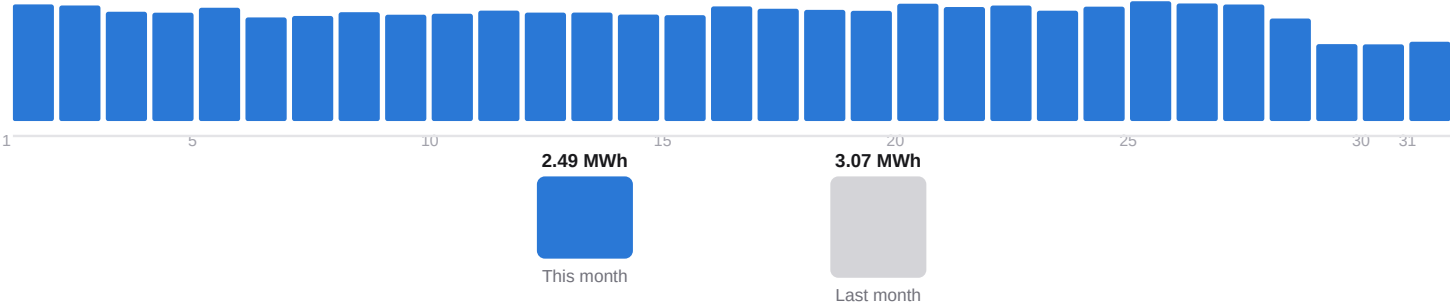

Monthly Generation Report — August 2026

2.49 MWh

Generation was down 18.9% from last month.

-18.9%
vs last month —
vs same month last year

Daily generation

Performance

Capacity Utilization Factor 12.7%	Specific yield 94.3 kWh/kWp	Data completeness 31/31 days days with a logged reading
---	---------------------------------------	--

Per-inverter breakdown

Inverter 1	659.6 kWh · 26%
Inverter 2	577.2 kWh · 23%
Inverter 3	658.3 kWh · 26%
Inverter 4	594 kWh · 24%
Total (all inverters)	2.49 MWh

Monthly totals

Total generation 2.49 MWh sum of daily readings, all inverters	Cumulative generation — meter reading, end of month minus start
---	---

Flags raised this month

- Inverter 4's generation is 55% below its 30-day average (last 7 days: 12.9 kWh/day vs 25.1 kWh/day).
- No reading logged for Inverter 2 for 3 days (last: Aug 31).

Environmental & financial impact

Estimated savings Rs. 21,157	Estimated CO2 offset 1,782 kg	Equivalent to 1,018 trees/yr
Lifetime generation 8.5 MWh		

Based on daily readings and cumulative meter values logged manually at the site — there is no irradiance/weather sensor, so comparisons are against this site's own past generation rather than an external theoretical baseline. Savings, CO2, and trees-equivalent figures are estimates, not certified measurements. View the live dashboard at <https://your-solar-dashboard.vercel.app/dashboard>.
