31/31 days

days with a logged reading

Per-inverter breakdown

Flags raised this month

- Inverter 4's generation is 55% below its 30-day average (last 7 days: 12.9 kWh/day vs 25.1 kWh/day).
- No reading logged for Inverter 2 for 3 days (last: Aug 30).

Environmental & financial impact

Estimated savings

Rs. 21,138

Estimated CO2 offset

1,781 kg

Equivalent to

1,017 trees/yr

Lifetime generation

8.5 MWh

Based on daily readings and cumulative meter values logged manually at the site — there is no irradiance/weather sensor, so comparisons are against this site's own past generation rather than an external theoretical baseline. Savings, CO2, and trees-equivalent figures are estimates, not certified measurements. View the live dashboard at <https://your-solar-dashboard.vercel.app/dashboard>.
