days with a logged reading

Per-inverter breakdown

Total (all inverters)

2.55 MWh

Monthly totals

Total generation

2.55 MWh

sum of daily readings, all inverters

Cumulative generation

—

meter reading, end of month minus start

Flags raised this month

- Inverter 4's generation is 55% below its 30-day average (last 7 days: 12.9 kWh/day vs 25.1 kWh/day).
- No reading logged for Inverter 2 for 3 days (last: Sep 2).

Environmental & financial impact

Estimated savings

Rs. 21,636

Lifetime generation

8.5 MWh

Estimated CO2 offset

1,823 kg

Equivalent to

1,041 trees/yr

Based on daily readings and cumulative meter values logged manually at the site — there is no irradiance/weather sensor, so comparisons are against this site's own past generation rather than an external theoretical baseline. Savings, CO2, and trees-equivalent figures are estimates, not certified measurements. View the live dashboard at <https://your-solar-dashboard.vercel.app/dashboard>.
